

11 Tips for Protecting Your Mobile Device

From the American Bankers Association®

Your mobile device provides convenient access to your email, social media and bank accounts. Unfortunately, it can potentially provide the same convenient access for criminals. The American Bankers Association recommends following these tips to keep your information, and your money, safe.

- 1. Use the passcode lock on your smartphone and other devices.** This will make it more difficult for thieves to access your information if your device is lost or stolen.
- 2. Always log out.** Be sure to log out completely when you finish a mobile banking session, or use a retail site where your credit card information is stored.
- 3. Protect your phone from viruses** and malicious software, or malware, just like you do for your computer by installing mobile security software.
- 4. Use caution when downloading apps.** Apps can contain malicious software, worms, and viruses. Beware of apps that ask for unnecessary “permissions” and delete unused or rarely used apps.
- 5. Stay updated.** Always download the updates for your your phone and mobile apps.
- 6. Avoid storing sensitive information** like passwords or a Social Security number on your mobile device.

7. Tell your financial institution immediately if you change your phone number, lose your mobile device or suspect fraud.

8. Be aware of shoulder surfers. The most basic form of information theft is observation. Be aware of your surroundings especially when you’re typing in sensitive information.

9. Wipe your mobile device before you donate, sell or trade it using specialized software or using the manufacturer’s recommended technique. Some software allows you to wipe your device remotely if it is lost or stolen.

10. Beware of mobile phishing. Avoid opening links and attachments in emails and texts, especially from senders you don’t know. And be wary of ads (not from your security provider) claiming that your device is infected.

11. Watch out for public wi-fi. Public connections aren’t very secure, so don’t perform banking transactions on a public network. If you need to access your account, try disabling the wi-fi and switching to your mobile network. Consider using a Virtual Private Network (VPN) app to secure and encrypt your communications when connecting to a public Wi-Fi network.
